

## HireBuddy Client side Questionnaire

There are thousands of vehicles moving around the world daily with the intention of different tasks. But many of them are unable to achieve these tasks due to vehicle mal-functions such as tire punctures and vehicle breakdowns. Even though there are many firms who provide such services to repair vehicles they are not able to find the customer and provide the service to them at the place of the cause. Therefore it will be very valuable if it is possible to do this, but unfortunately up to date there has been no scenario that has found a solution to this problem. "HireBuddy: Online automobile Service Platform" is the best solution for the customers who face there kind of problems. Proposed system will be a new era of automobile repairing services because this is very quick, efficient and very cheap, therefore the customers will be very well satisfied. By using this system the customers who faced the problem can request the service of the motor mechanic or tire technician through the android device based on reviews and experience of the service supplier and then service supplier will be notified about the requirement of the customer. As to the type of the service required and the place they are in and then service team will go to the place as quick as possible. Also the proposed system has a feature for the customer to see how long it will takes for the service team to reach the place. Our approach is to be mainly a user friendly application and an effective android based mobile application to interact with three separate users such as customer, motor mechanic and tire technician.

\* Required

1. Email address \*

---
